Climate Risk Assessment & Real-time Flood Inundation Forecast

Company Deck

Gaia Vision

Provide Climate Risk Assessment &
Real-time Flood Inundation Forecast Solution…

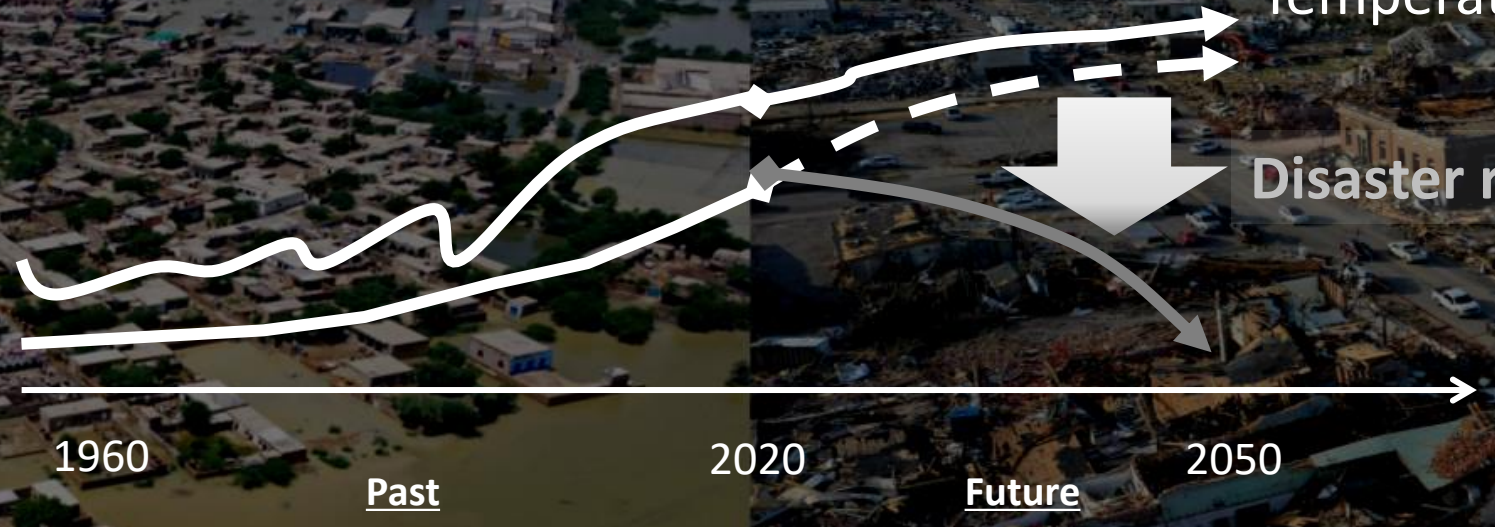
…using flood simulation technology from the University of Tokyo

With natural disasters occurring frequently worldwide,
We stood up to Minimize the Damage by Climate Change

Creating a "**world where the Earth and human society exists in harmony**" through cutting-edge science and technology – this is our vision.

(DW.com)

(Nippon.com)



(FT.com)

(The Atlantic)

Companies' climate risk management has progressed by TCFD, etc.
Yet, 2 issues remain for natural disaster risk

Until now

International rules (TCFD TASK FORCE ON CLIMATE-RELATED FINANCIAL DISCLOSURES ISSB ...)

Demand

Autonomous climate change risk management and disclosure

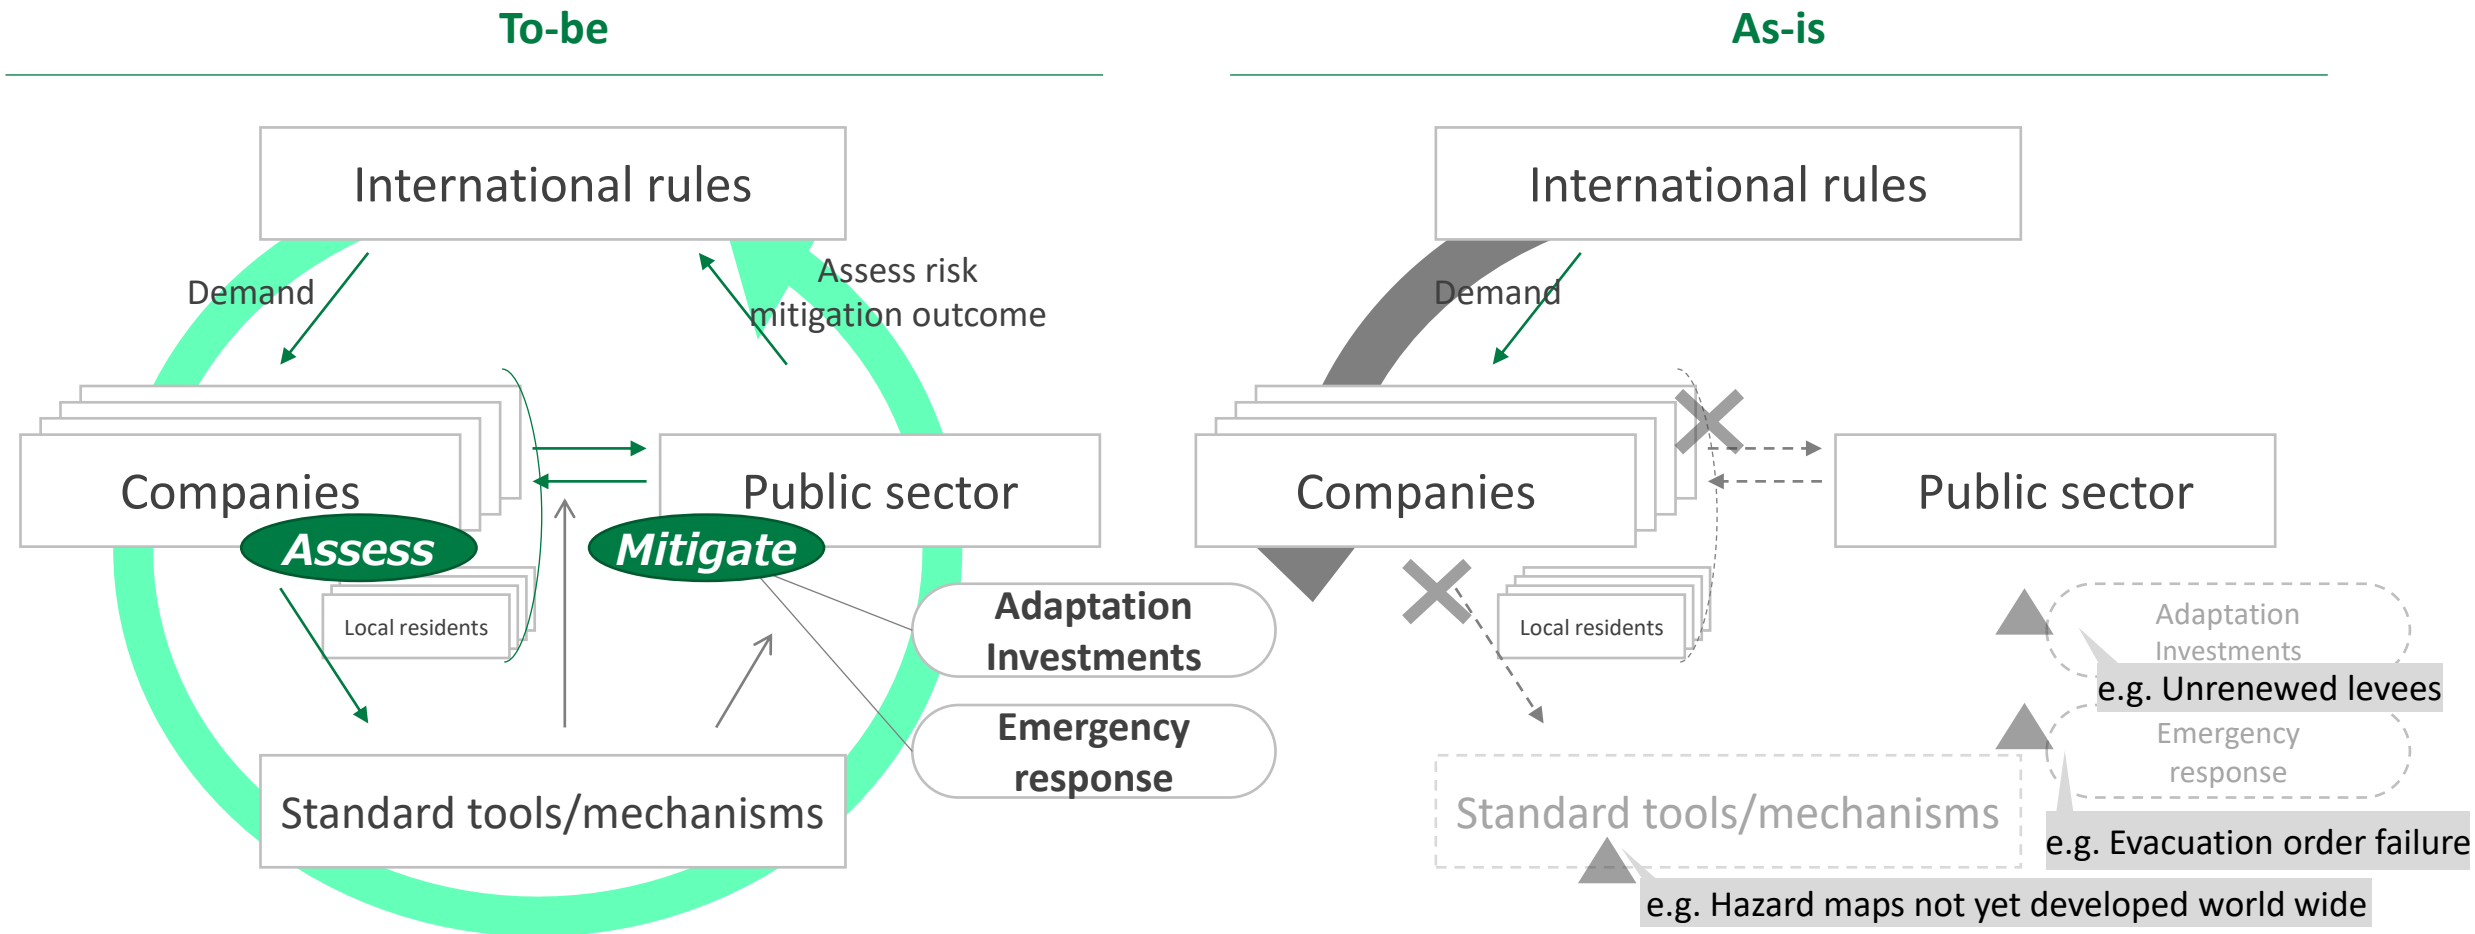
Companies

Issues

	Measurement	Countermeasure
Physical risk (disasters)	1 **Difficult**	2 **Limited**
Transition risk (decarbonization)	**Possible** GHG emission calculation	**Possible** Renewable energy / energy saving etc.

1. Disaster risk is difficult for companies to analyze on its own as it requires simulation with uncertainty
2. Cross-sector measures (e.g., watershed flood control) are fundamentally necessary

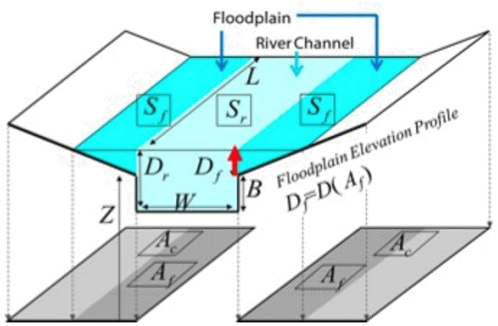
Companies' risk assessments should be aggregated for designing public countermeasures. Yet, such risk assessment is not possible, disabling the process towards risk mitigation.



We provide (i) risk analysis PF; (ii) real-time forecasts; and (iii) flood control acceleration globally by utilizing flood simulation technology

Core technology

Global flood simulation technology from the Univ. of Tokyo



Assess

1 Climate Risk Analysis Platform

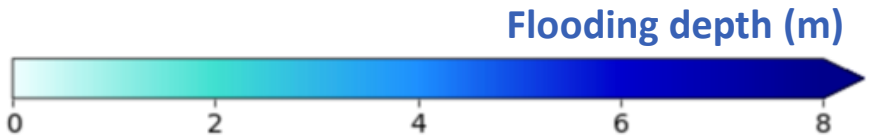
Quantitative results & flooding risk maps

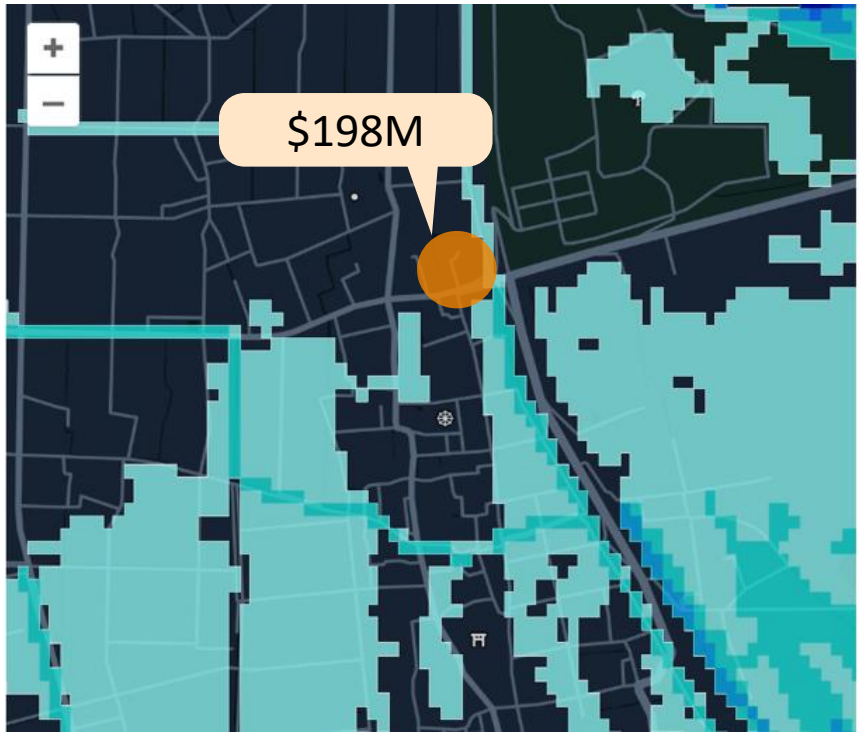
Global **High resolution**

Enables risk analysis under future climate conditions



Financial impact

Current climate



Future climate (+4°C scenario)

Future scenario

+1.5°C　+2 °C　+4 °C

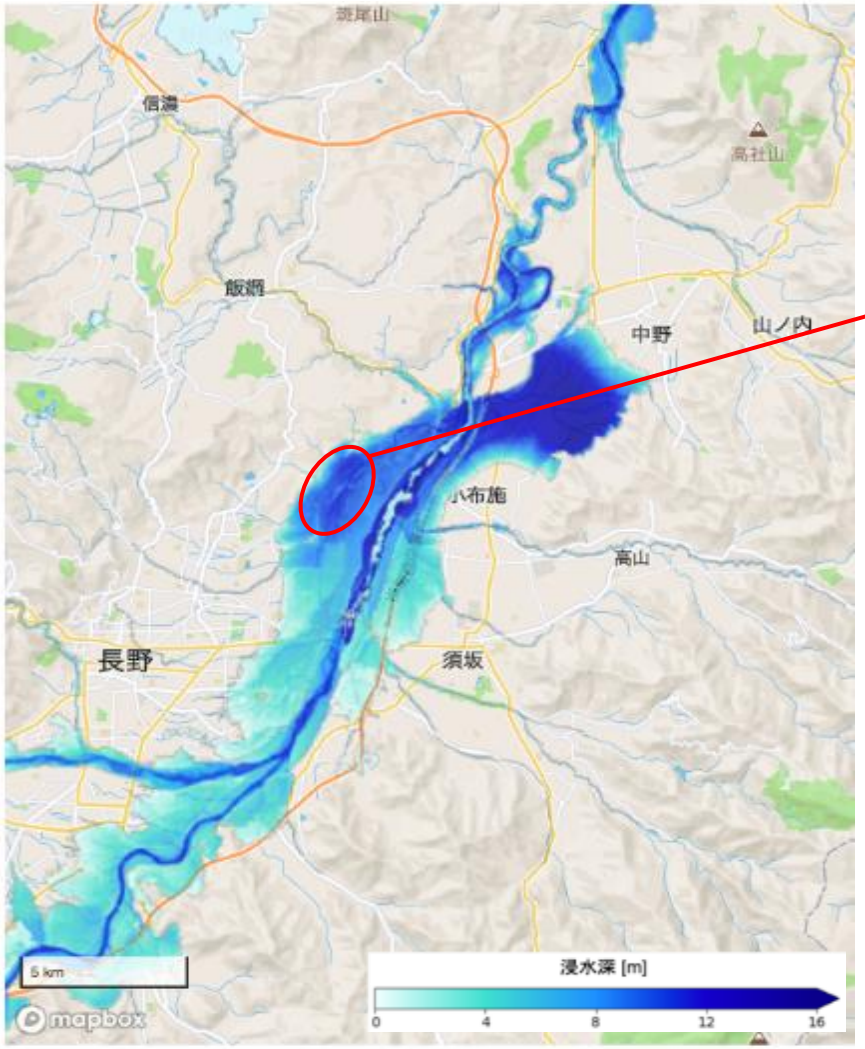
Financial impact

Asset damage　Business suspension

Advanced global and high-resolution simulation technology

(Existing overseas data ineffectual for its low resolution)

Gaia Vision Simulation output

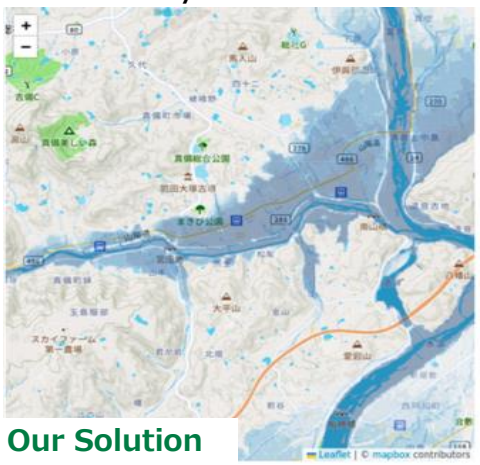


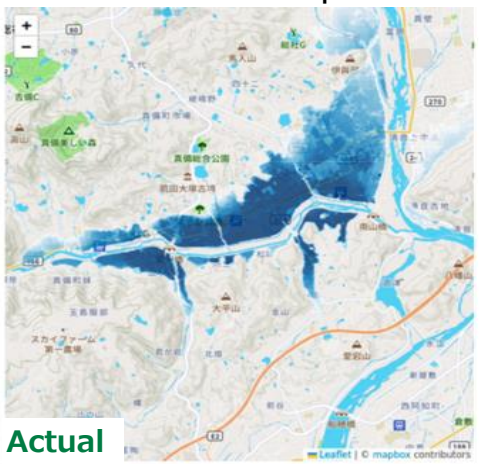
Flooding by Typhoon Hagibis (Oct. 2019)

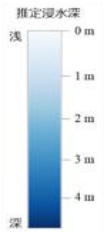
Existing data

Our solution displays similarities to actual flooded areas

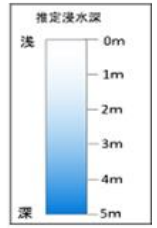
July 2018: Torrential rain in western Japan



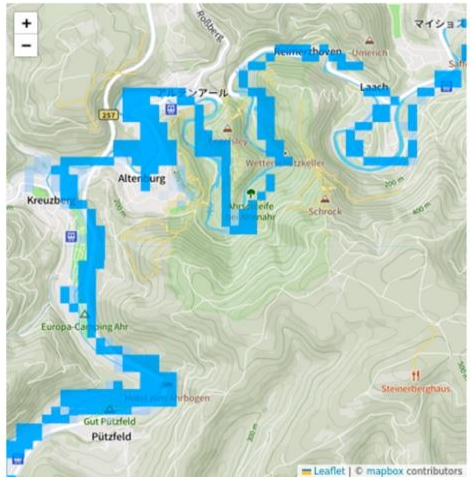




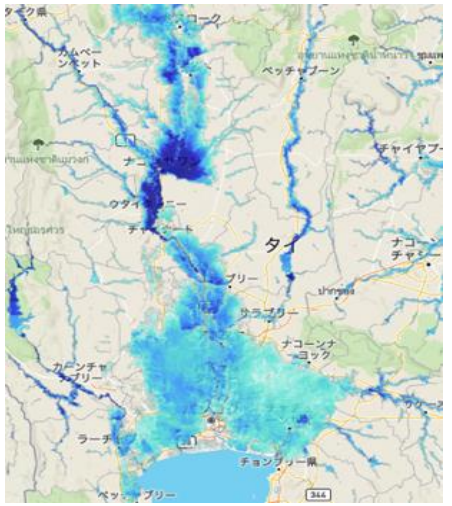
October 2019: Typhoon in East Japan

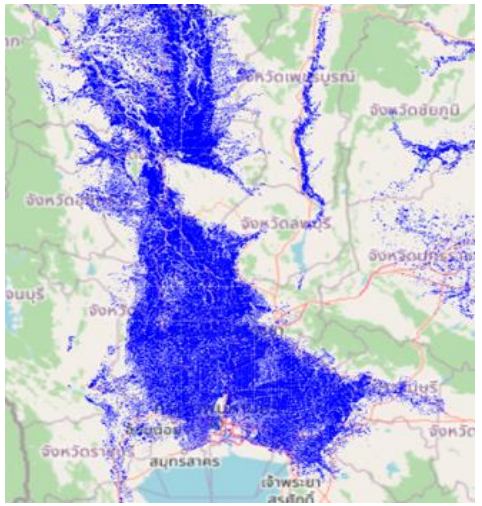


July 2021: Flooding in Germany and Belgium



October 2011: Thailand Floods





Used for Disclosure reports

NEC

Issued TNFD report based on risk analysis by Climate Vision

NEC TNFD Report 2023

July, 2023

Risk management
—Water related risk mgmt. in Pathum Thani, Thailand—

In cooperation with Gaia Vision, a startup from the Univ. of Tokyo, our high-resolution flood simulations for 1.5°C and 4°C scenarios showed that the flood depth in this area is 0.6m under current conditions, 0.7m under the 1.5°C scenario, and 0.8m under the 4°C scenario in a 1/100 probability event. Although the flooding depth will increase as the temperature rises, we were able to confirm that current countermeasures will be sufficient to cover such increase.

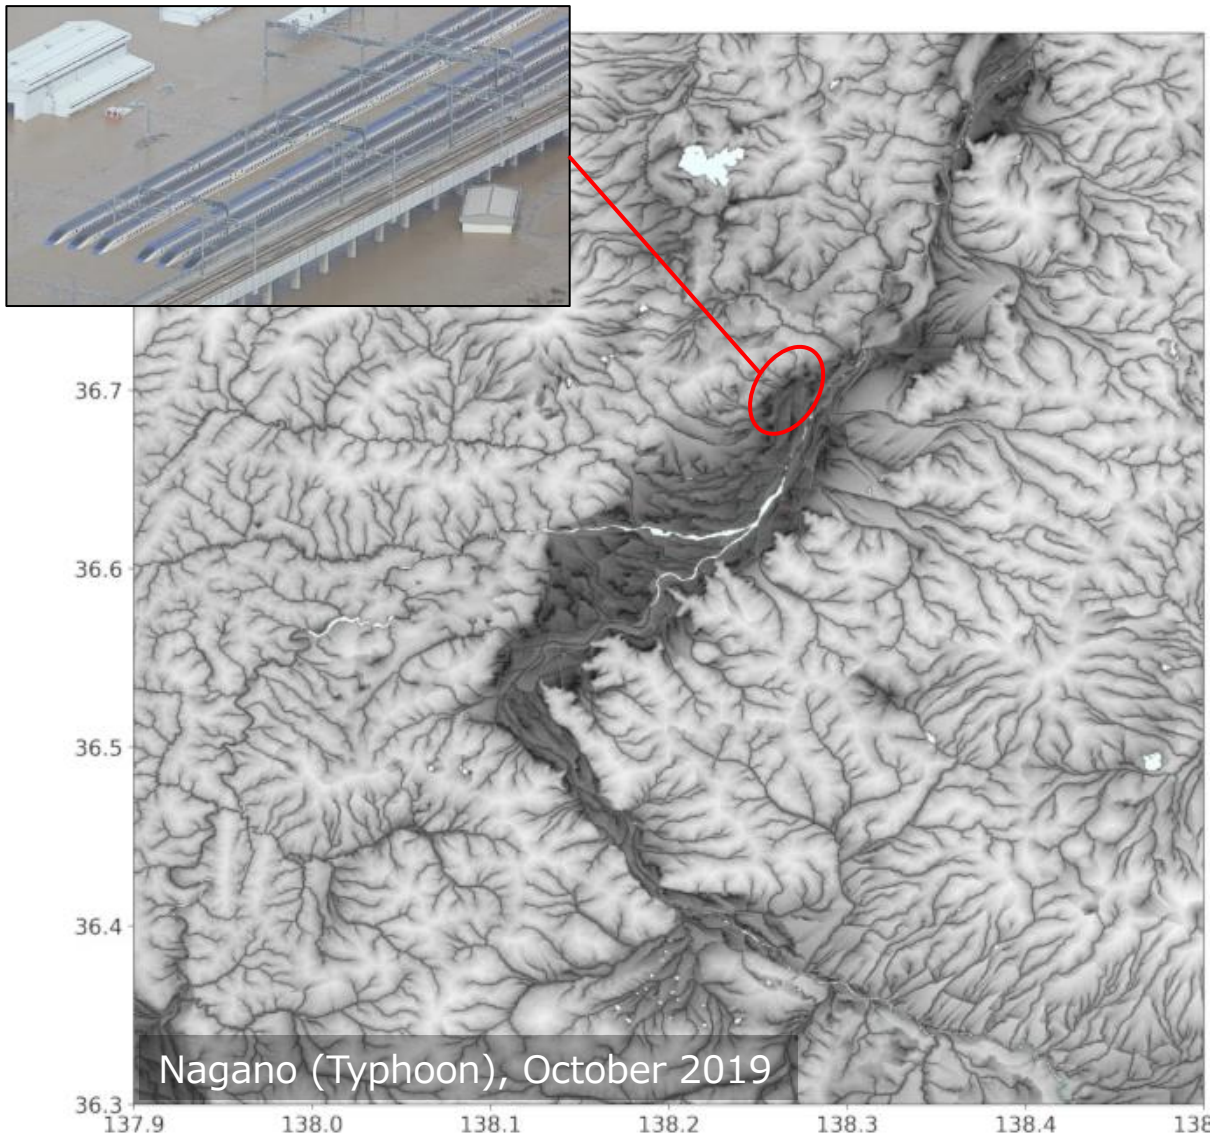
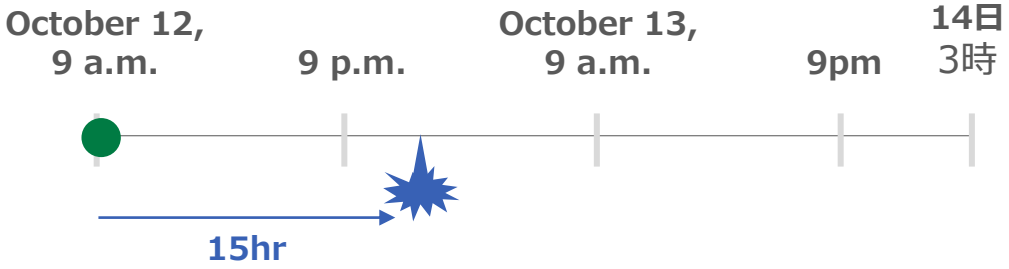
Real-time flood forecast solution

Risk prediction





Link: https://www.youtube.com/watch?v=H1RdnhHJfYM

Enable evacuation order decisions based on where inundation will occur

Findings from discussion with local governments

Difficult to issue evacuation orders

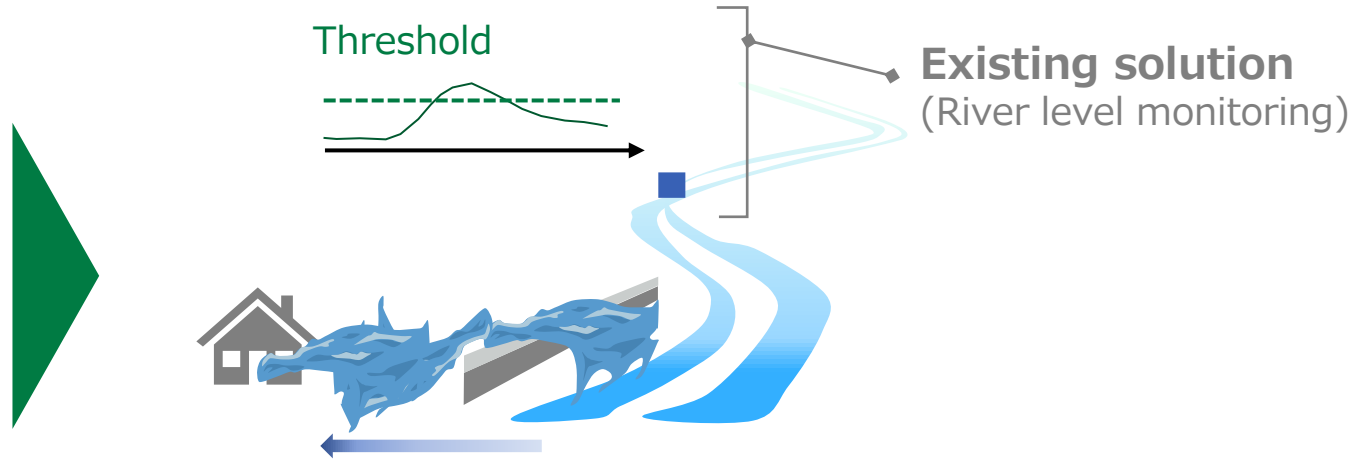
Ideally…

Make decision
based on **adequate prediction**

Gap

Existing solution

Limited to river level monitoring and prediction

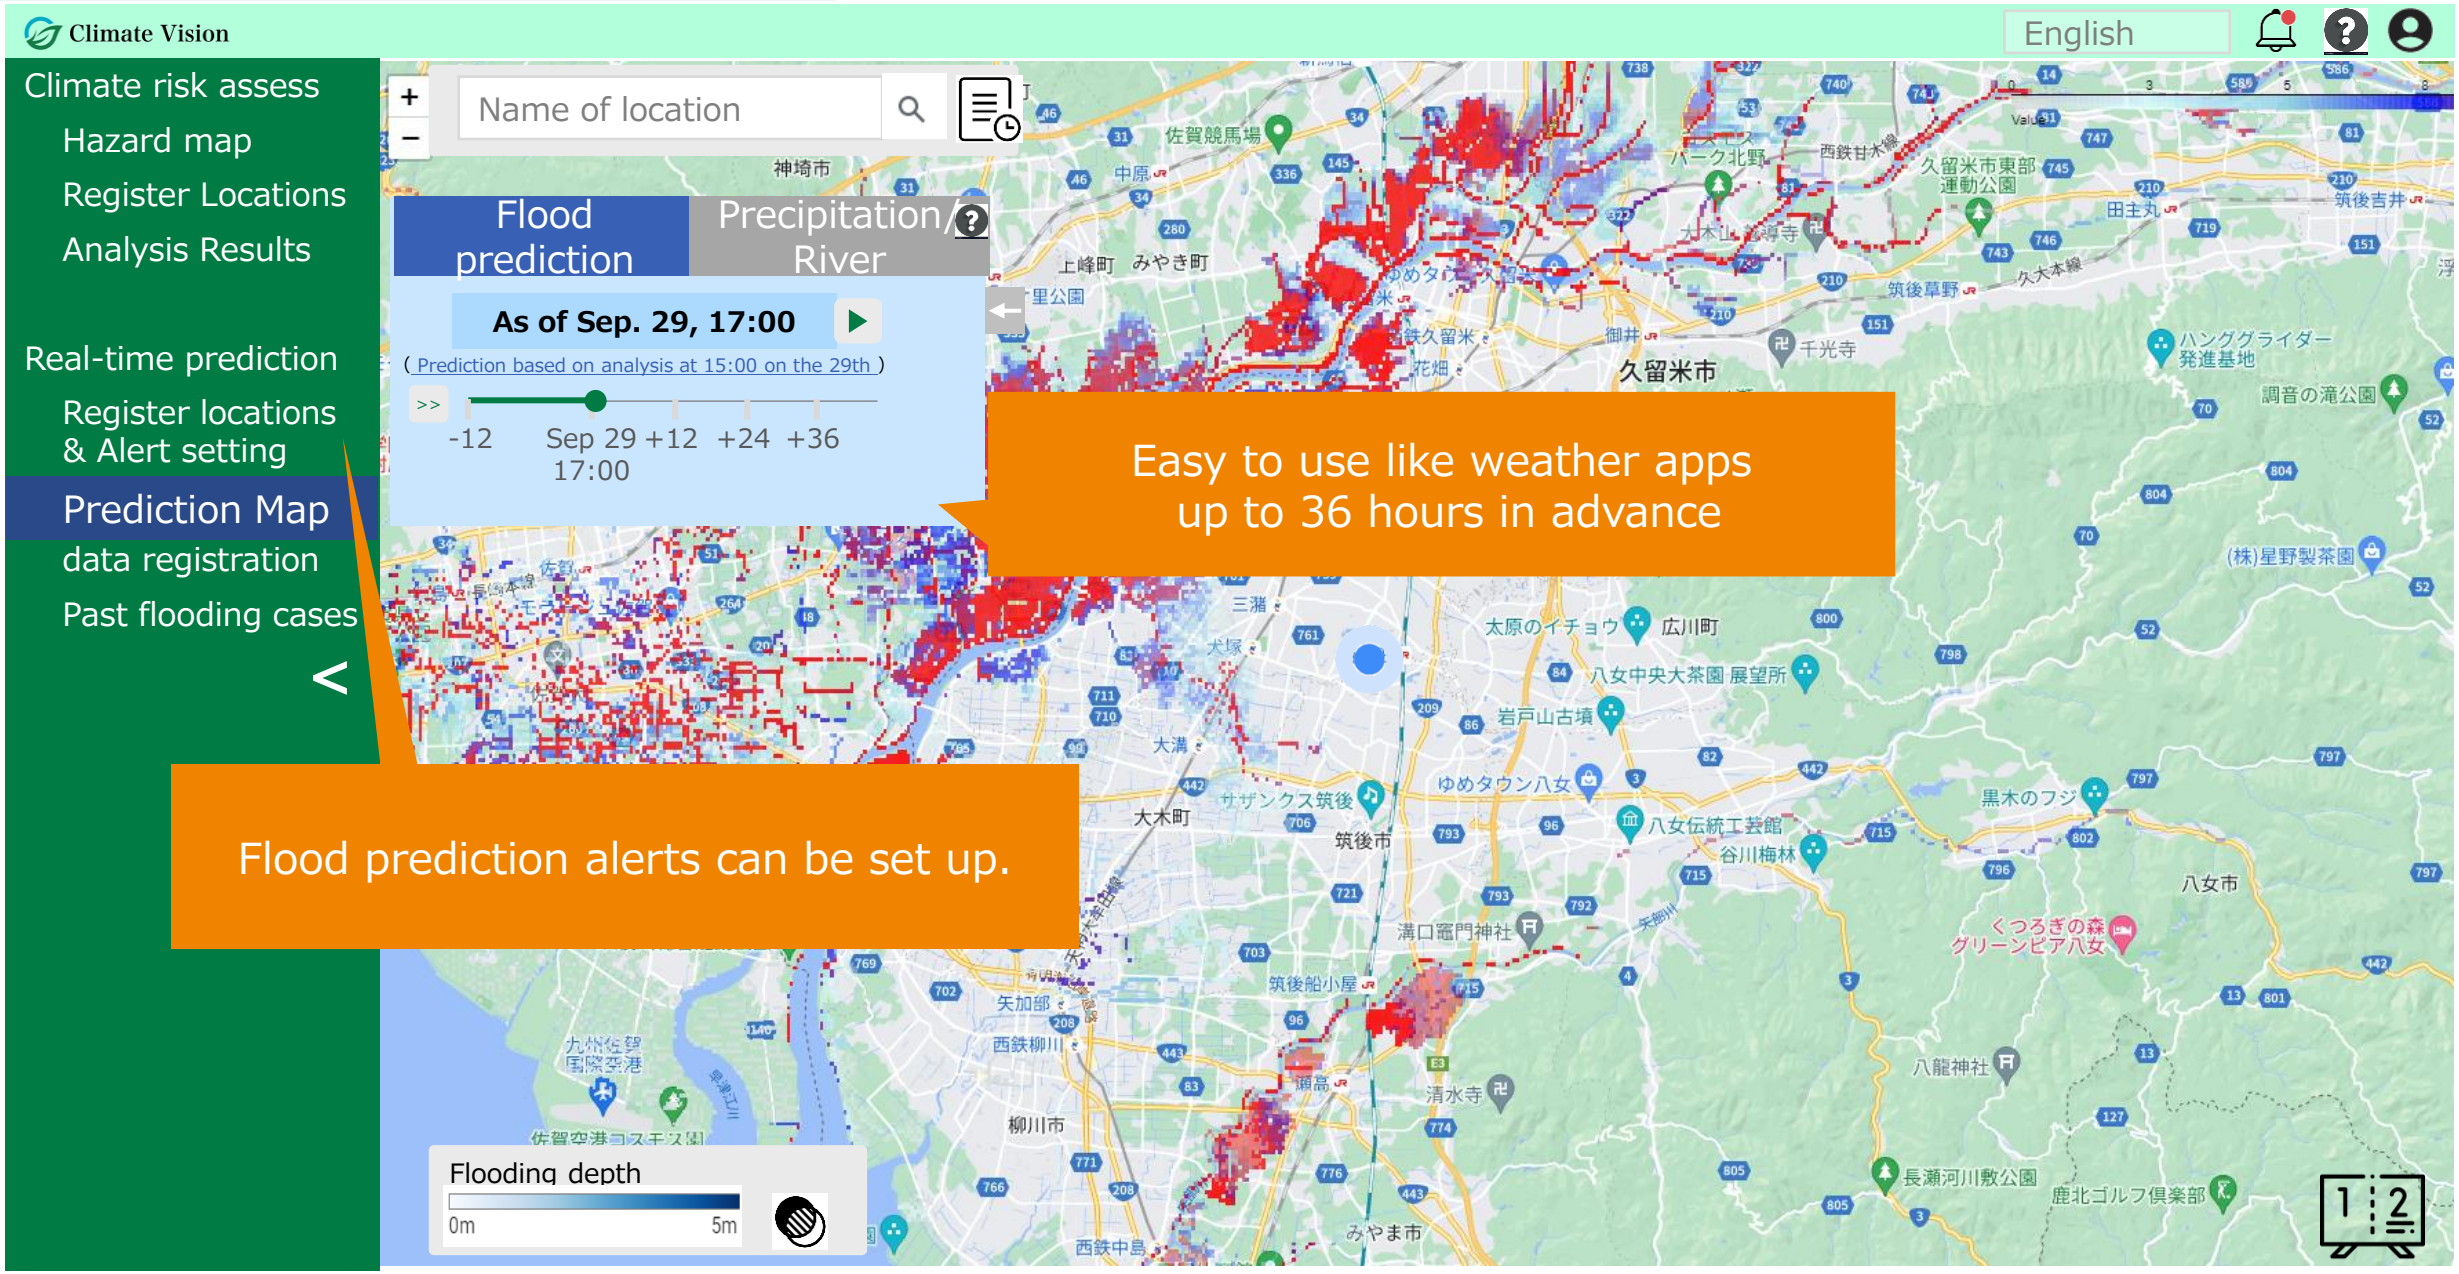


Our Solution

World's Leading Flood Inundation Prediction

Real-time flood forecast web app (under development)

Risk prediction



Risk prediction

Three type of use cases:

Local Governments	■ **Effective evacuation warnings**
Infrastructure/ Manufacturing/etc.	■ ***BCP*** ***- Countermeasures based on disaster forecast*** ***- Optimize resource allocation***
Insurance & Finance sectors	■ ***Real-time disaster damage assessment***

We have 50 companies as free users and 18 companies as paid users.

Product / Services	#	Industry and Cases
Climate Vision Lite	**50** 社	• Manufacturing • Logistics • Construction • Infrastructure, etc.
Climate Vision	**10** 社	• Manufacturing（NEC/Sakatainx/etc. ） • Logistics, etc. ：Risk assessment and Information disclosure
Realtime Flood forecast, Risk control acceleration and others	**8** 社	• IT Company: Disaster Prevention simulation • Infra : Realtime river level estimation • Local governments : DX advisory for river management

Our customers appreciate our global, future, and high-resolution simulation.

"

1 **We want to analyze the data centrally on a global basis.**

(National hazard maps can be used to a certain extent for major domestic rivers but...)

2 **We want to analyze future climate scenarios**

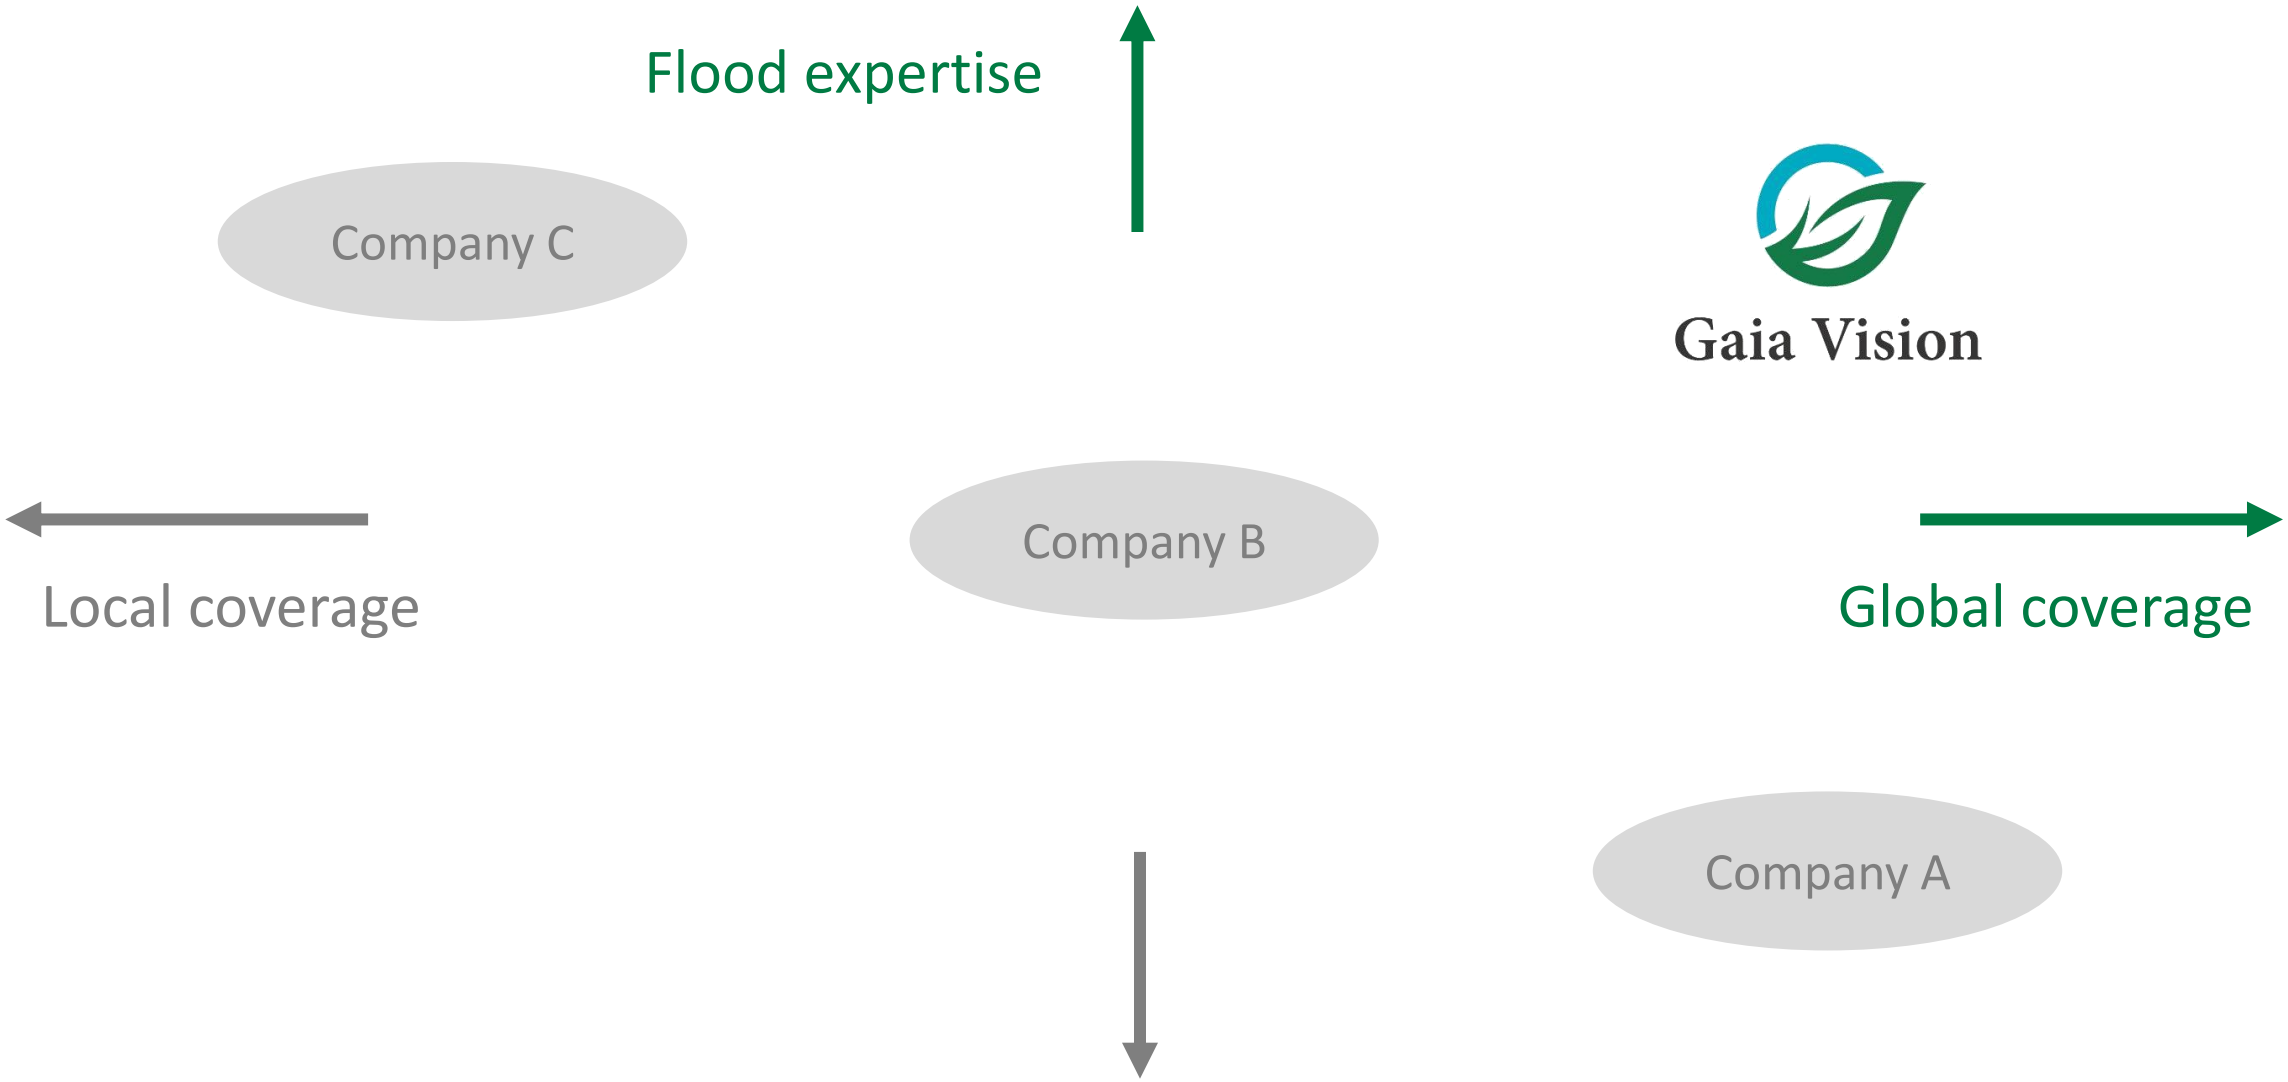
(Existing data is only for current climate, thus future analysis was challenging…)

3 **We want to conduct high-resolution analysis**

(Existing data was unsatisfactory as it did not fit with our intuitions in the field)

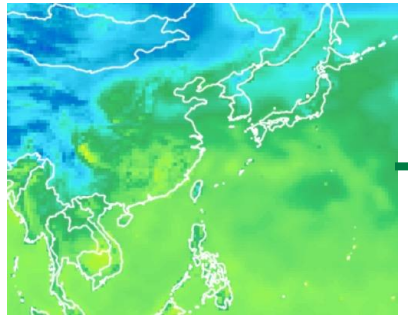
"

Global coverage and flood expertise are our strengths.

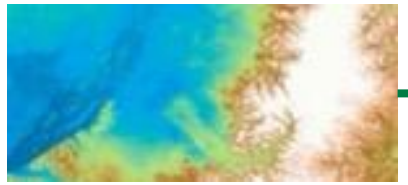


Global River Hydrodynamics Model and High-Resolution Geographic / River Data from the Univ. of Tokyo

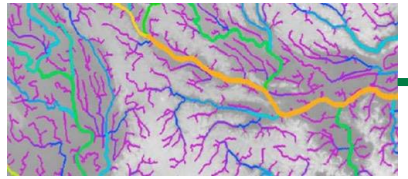
Rain/Discharge data



Geographic data

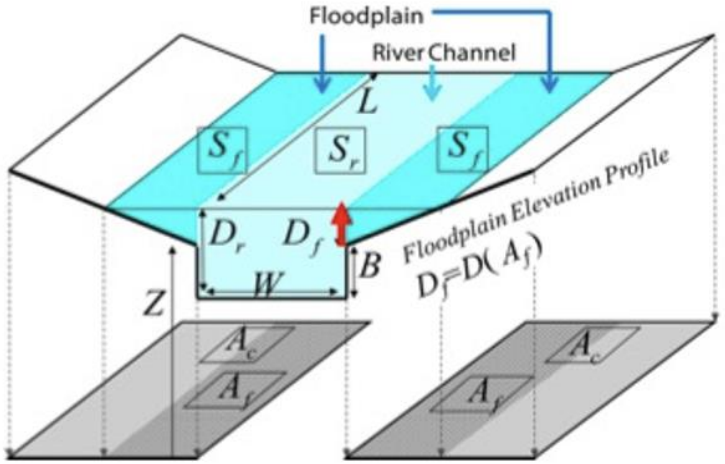


Flow direction data

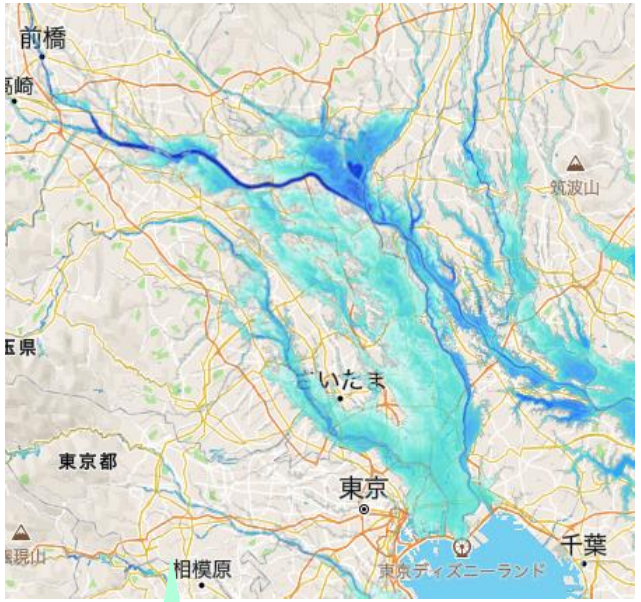


Global River Hydrodynamics Model

CaMa-Flood



Gaia Vision
Flood hazard map

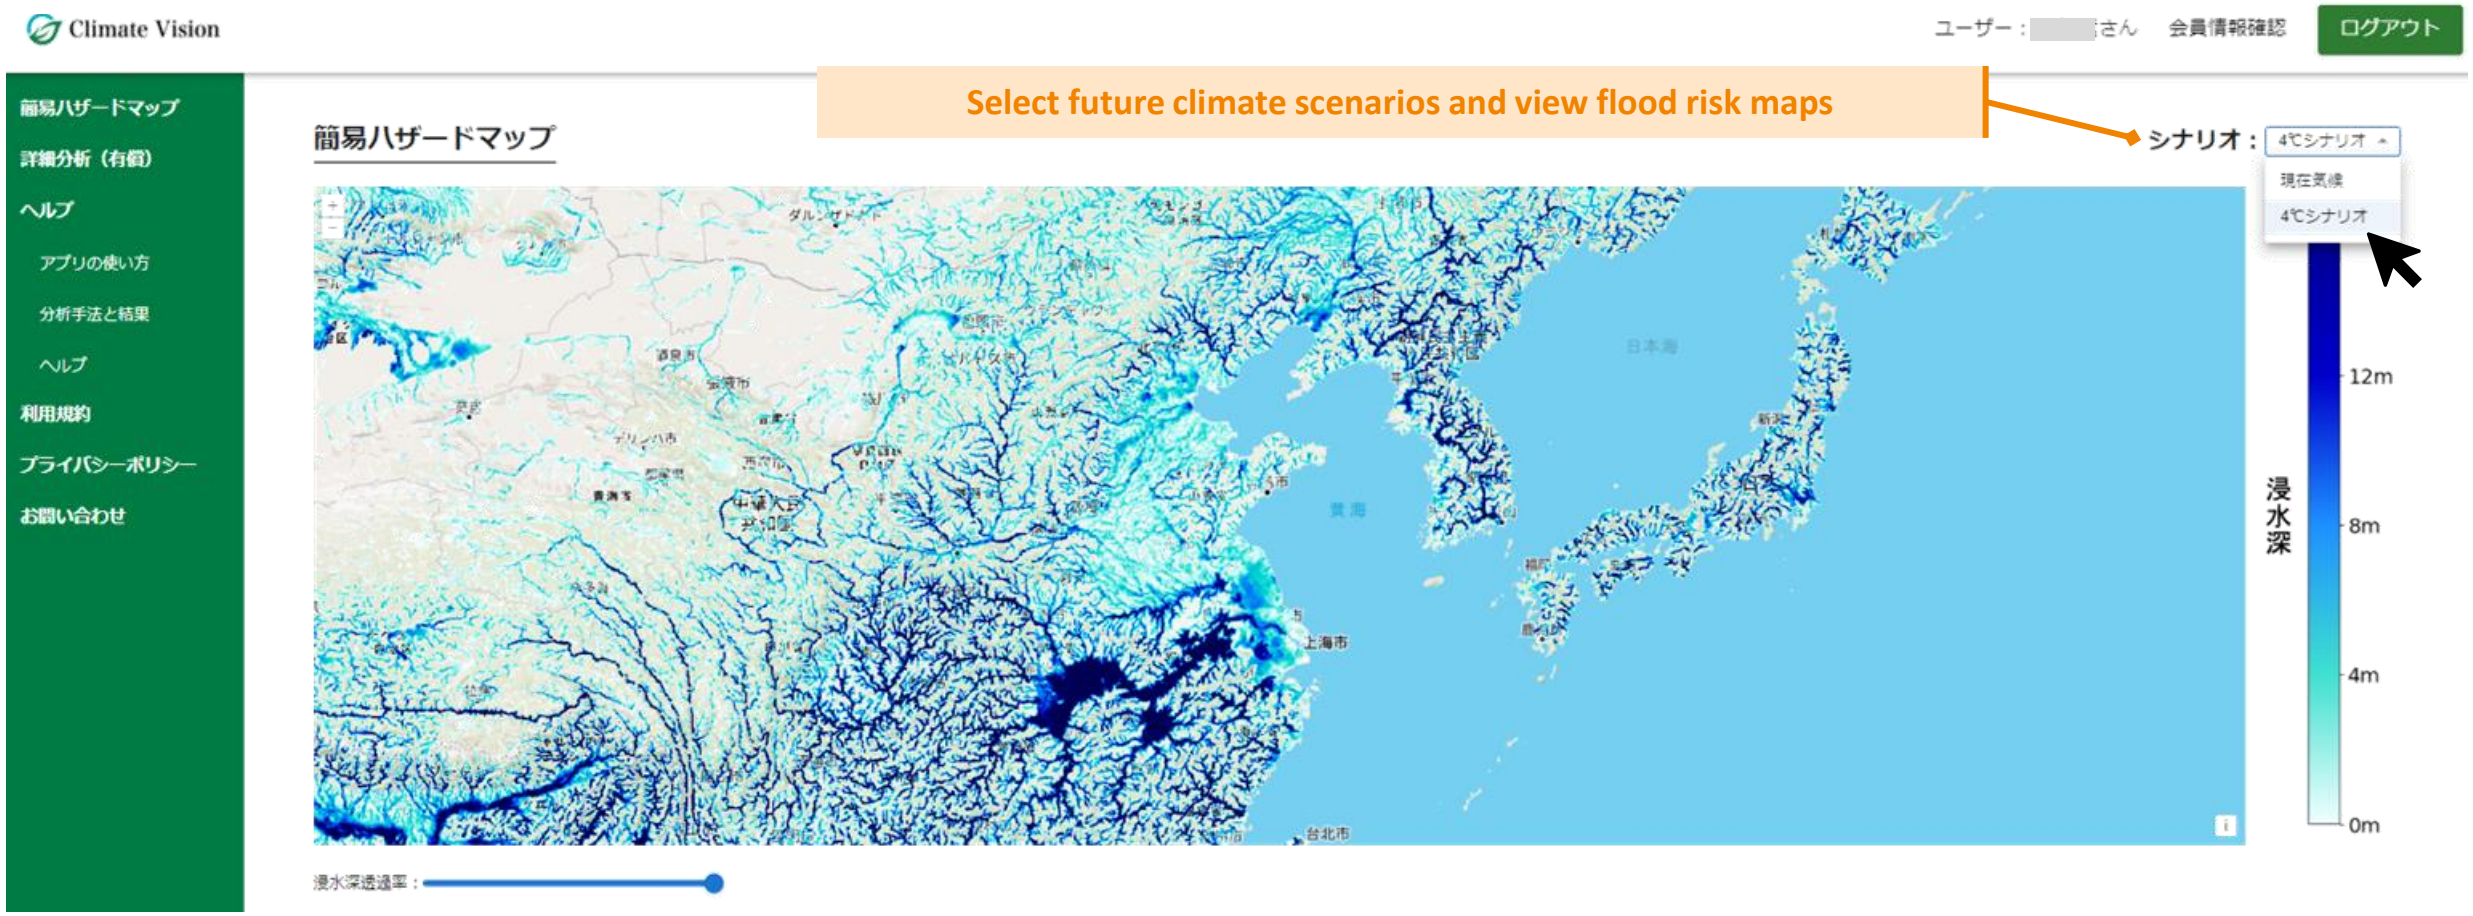


Resolution
- **90m**
  (Japan: 30m)

Global, high-resolution simulation at lower cost than conventional methods

Easy access with a simple user registration.

Climate Vision Lite: https://climate-vision-atlas.gaia-vision.co.jp/



Provides an overview of worldwide flood risk (flooding depth [m]) and climate change impacts. Data is used for initial screening before detailed analysis.

※ Free ver. limitations: resolution (500m for free ver. <> 30m/90m for paid ver.*), zoom level, # of scenarios, location registration/analysis functions, financial impact assessment

*30m in Japan, 90m overseas

Free ver. for screening risk presence <> Paid ver. for detailed analysis

	Free version	Paid version
	Identifies the presence and general extent of flood risk, which informs the necessity of a paid analysis	**Useful for quantitative analysis and countermeasure planning for disclosure reports**
Area coverage	**Anywhere globally**	
Development method	✓ Uses CaMa-Flood & high-resolution geographic/river data (original license by Gaia Vision) by the Univ. of Tokyo ✓ Uses the future climate ensemble data (d4pdf/etc.)	
Resolution/ output	✓ **Medium (500m), limited zoom level** ✓ **Color bar**	✓ **High (Domestic 30m / Overseas 90m)** ✓ **Numerical values (flooding depth / financial impact)**
Functions	✓ Flooding depth under current climate (1-in-100-year) ✓ Inundation depth under future climate (4 °C scenario / equivalent to ~2080)	✓ Flooding depth under current climate by probability (1-in- 10/100/1000 year) ✓ Inundation depth under future climate by scenario (1.5/2/4 °C scenario) ✓ Financial Impact Assessment ✓ Consulting / Reporting (Standard Plan ~)

Managements

Yuki KITA

CEO, Founder *# R&D*

- Ph.D in Environmental Studies
- **Climate change & flood risk researcher** in the Univ. of Tokyo
- Insurance industry experience

Satoru DEMOTO

Co-founder *# BizDev*

- M.S. degree in **Climate Change**
- Former youngest certified weather forecaster
- Strategic consulting & startup BizDev

Advisors

Dai YAMAZAKI

Technical Advisor

Associate professor at the Institute of Industrial Science, the Univ. of Tokyo

Jun KAMO

Advisor

- CDO Club Japan Founder and CEO

Useful for private, financial, and public sectors

Private Companies
