# Our product ① UNIFIX

## Mount system for the flat roof

### ✓ Only putting on the roof

No fixing with the anchor bolt is required, therefore no leakage on the roof.

### ✓ Resistance against the heavy wind and the earthquake

Wind Speed Resistance 70m/s※

Resistant to the earthquake : Class B (equivalent to seismic intensity of 6)

※Maximum 3-second average wind speed

### ✓ Less load to the roof

Around 60kg/m

(depending on the layout)

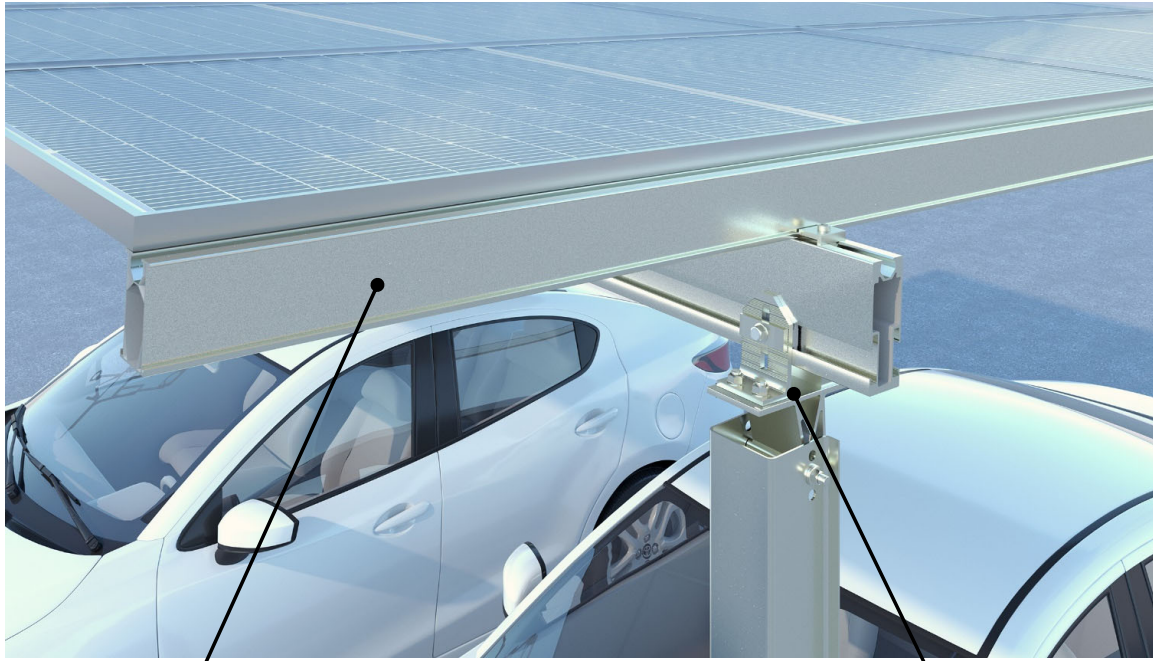

### ✓ Construction with human power

No drilling work, short construction period, easy recovery

# Our product ② TM2 Dulight

## Solar carport for the industrial use

✓ Dual module which enables power generation from both side.

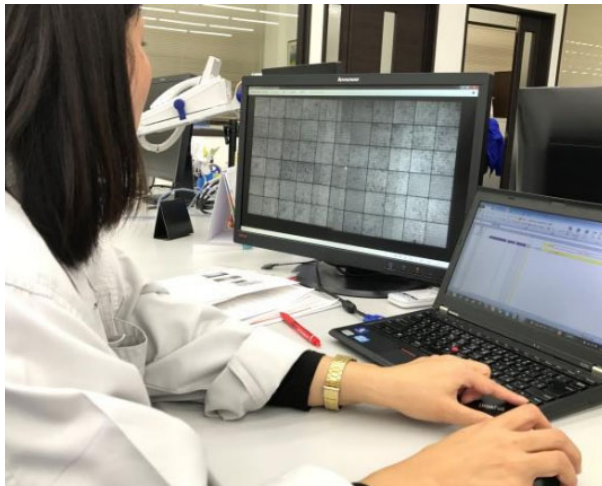

✓ Can be installed using the pile method without concrete.

With using our experience and capability earned from the mega solar construction, we have launched this product into the self-consumption market. Considering the business feasibility, we will introduce it with a competitive price.

# Our track record

We have track record of JCM (Joint Crediting Mechanism), and we have quite strong confidence in the quality of our solar PV modules, together with the construction and designing of solar PV system.

All of our solar modules are checked for cracks in the cells during manufacturing before being supplied.

If you have any questions about solar power, we are here to help. We look forward to hearing from you.
