

# Technical Support for Reduction and Elimination of Mercury Use in ASGM Sector

---

Satoshi MURAO

Daiichi Institute of Technology  
Kokubu-chuo, Kirishima, Kagoshima,  
Japan 899-4395

Jan. 15, 2021

# Our challenge has been

# Technologies are already available.

**Blue bowl**

**Shaking table**

**Borax smelting**

**Cyanide leaching**

**(1)Cyanidation**

**(2)Thiosulfate leaching**

**(3)Thiourea leaching**

**(4)Halide leaching**

**(5)Microbial cyanidation**

**BPPT tested most of the methods and found that cyanide is the only substance applicable to hard-rock ore in Indonesia.**

## ASGM training in Minamata & Tokyo (11-15 December 2017)

Follow-up study  
(February 2018, February 2019, January 2020)

# Moving Forward

Indonesian NAP on ASGM stipulates cross cutting measures which needs intersectoral cooperation.

→ **MOEJ study team has been conducting interviews on various stakeholders to identify areas\* in which Japan could contribute to the implementation of the NAP**

\* avoid duplication of efforts made by ongoing project (e.g. GEF-ISMIA)

## Potential areas of cooperation

Area	Know-hows or techniques possibly provided by Japan
Overall	<ul style="list-style-type: none"><li>• Development of Hg inventory and material flow</li></ul>
Mining	<ul style="list-style-type: none"><li>• Joint research on Hg free gold extraction</li><li>• Inspection of illegal activities</li></ul>
Environment	<ul style="list-style-type: none"><li>• Hg monitoring (sampling &amp; analysis)</li><li>• Identification &amp; remediation of contaminated site</li><li>• Storage &amp; disposal of Hg waste</li></ul>
Health	<ul style="list-style-type: none"><li>• Public awareness raising</li><li>• Medical diagnosis</li><li>• Risk assessment &amp; risk communication</li></ul>
Economics	<ul style="list-style-type: none"><li>• Fair-trade of Hg free gold (e.g., ethical jewelry)</li></ul>

Webinars to introduce know-hows or techniques are under consideration.

# Instruments and methods to control/observe/monitor ASGM

**Topography, rod-mill station, illegal activities**

**RTK**

**Drone**

**Mercury use by ASGM**

**Varve and man-made-strata science**

**Positive Matrix Factorization (PMF)**

**Back trajectory analysis**

**Health**

**Medical statistics**

**Simple detection device**

# A simple detection device

---

Based on a quartz crystal microbalance (QCM-Hg)

It utilizes the direct reaction of Hg and the Au electrode of the quartz crystal element via the phenomenon of Au–Hg amalgamation.

The QCM-Hg is based on the conversion of the change in the mass adsorbed on the electrode surface of the quartz crystal into a change in frequency.

Noda et al. (2020) “Basic Detection Characteristics of Quartz Crystal Microbalance-based Method of Determination of Mercury”, *Sensors and Materials*, Vol. 32, No. 6, 2159–2166.

# Eco DRR: A new technology possibly applicable

## Hg contamination is a disaster

- UN International Strategy for Disaster Risk Reduction (UNISDR) says a disaster is “a serious disruption of the functioning of a community or a society involving widespread human, material, economic or environmental losses and impacts, which exceeds the ability of the affected community or society to cope using its own resources”.
- Disasters are mainly social constructs: they are largely determined by how a society manages its environment, the conditions of vulnerability that are present, its capacity to face adversity and what resources are available for recovery.

## Sustainable communities

Even the ASGM was mitigated/eliminated, most communities will be exposed to the harmful effect from residual mercury. Every community needs holistic environmental management.

## Eco-DRR

"Ecosystem-based disaster risk reduction (Eco-DRR) “is the sustainable management, conservation and restoration of ecosystems to provide services that reduce disaster risk by mitigating hazards and by increasing livelihood resilience”

# Where do we go?

We should consolidate idea how to build sustainable local communities with different plans depending on the reality of the target area

- Do miners wish to continue gold production without/with cyanide?
- Can you control elusive group such as *Technological Ninja* in Mongolia?
- Can community afford to invest on the development of new technologies?
- Do they start new business such as tourism?
- Do we prioritize rehabilitation of brown land?
- How can we secure good environment for the community?

-----
