

GHG Emission Calculation Cloud Service

Zeroboard Inc.

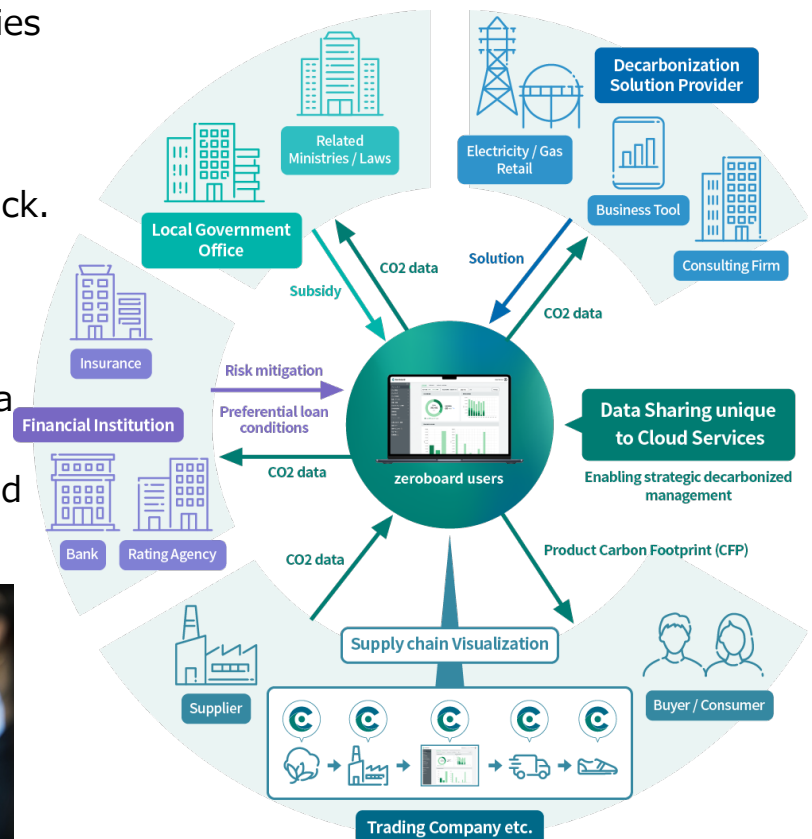

Overview of product / service

- The calculation and visualization of greenhouse gas (GHG) emissions not only improves corporate value but also contributes to cost reductions.
- Zeroboard is a cloud service that calculates GHG emissions according to international standards and manages efforts to reduce GHG emissions.
- Our services go beyond calculating GHG emissions at the organizational and product levels. By collaborating with over 100 partner companies, we propose optimal GHG reduction solutions tailored to our customers' specific challenges.

Achievement

- With over 15,000 companies already using our product, Zeroboard has a solid reputation for ease of use based on customer feedback.
- Our product is utilized not only by listed companies required to disclose Scope 1-3 emissions but also by a wide range of businesses, including medium-sized and small enterprises.
